```
In [1]: import sys import os sys. path. append (os. pardir)
```

Userクラス

GameType

```
In [7]: from user.user import GameType

In [8]: print([i for i in GameType])
        [〈GameType.REPORT: 0〉, 〈GameType.SHIRITORI: 1〉]

In [9]: from user.user import ReportMode

In [10]: print([i for i in ReportMode])
        [〈ReportMode.EASY: 'かんたん'〉, 〈ReportMode.NORMAL: 'ふつう'〉, 〈ReportMode.DIFFICULT: 'むずかしい'〉]

In [11]: from user.user import ShiritoriMode

In [12]: print([i for i in ShiritoriMode])

[]
```

GameInfo

```
In [13]: from user.user import GameInfo

In [14]: print(GameInfo. __doc__)

ゲームの情報に関するクラス
モードに関する定義は
レポートでは難易度(ReportMode)、しりとりでは品詞の種類(ShiritoriMode)なので変数とした
```

```
In [15]: game_info = GameInfo(game_type=GameType. REPORT, mode=ReportMode. EASY)
```

2020/11/29 user

```
In [16]:
          game_info.type
         <GameType.REPORT: 0>
Out[16]:
In [17]:
          game_info.mode
         〈ReportMode. EASY: 'かんたん'〉
Out[17]:
        Score
In [18]:
         from user user import Score
In [19]:
          print(Score. __doc__)
             ゲームクリア時のスコアに関するクラス
In [20]:
          score = Score(game_info=game_info, time=50, number_of_words=70)
In [21]:
          score.game_info.type
         <GameType. REPORT: 0>
Out[21]:
In [22]:
          score.game_info.mode
Out[22]: 〈ReportMode. EASY: 'かんたん'〉
In [23]:
         score.clear_time
Out[23]: 50
In [24]:
         score.number_of_words
Out[24]: 70
```

Userにスコアを追加してみる

add_score()内でScoreの生成をしてくれる

```
In [25]: user.add_score(game_info=game_info, time=30, number_of_words=50)
In [26]: user.name
Out[26]: 'test_user'
In [27]: user.scores
Out[27]: [<user.user.Score at 0x208ab222850>]
```

scores[-1]とすれば一番最新のスコアを見られる

```
In [28]: latest_score = user. scores[-1]
```

2020/11/29 user

In [29]: latest_score. game_info. type

Out[29]: 〈GameType. REPORT: O〉

In [30]: latest_score. game_info. mode

Out[30]: 〈ReportMode. EASY: 'かんたん'〉

In [31]: latest_score. clear_time

Out[31]: 30

In [32]: latest_score. number_of_words

Out[32]: 50
